

HB 6519

Hello,

I am writing to express my support for labeling GM Food. Actually, I would support a complete Ban on Genetically modification of food and crops as many other countries have done. I find it abhorrent that America is willing to place profits ahead of human well being and allow unsafe and untested crops to be fed to livestock and especially to people, which is ultimately the same thing. The purpose of government in a capitalistic society such as ours is to limit the boundless greed of corporations and protect the safety and well being of it's citizens.

Please Label GM food and crops, then, if necessary, ban it all together. I have read numerous studies online citing the dangers of consuming these foods, the environmental disasters resulting from growing these crops, and the failure of these crops to live up to their promises of increased yields, drought resistance, etc. etc. The GM crop experiment has failed. It is hurting the planet and us. Make it stop.

Sincerely,
Michael Whitten
